

A photograph showing two bongo net codends, which are cylindrical containers with fine screens, attached to a ship's deck. The codends are covered with a blue and white striped fabric. They are positioned on a dark, wet surface, likely the deck, with a yellow rope visible in the background.

DID YOU KNOW?

At the end of each bongo net is a cylindrical container called a “codend” covered with a fine screen that lets only the tiniest organisms through.
